Trans. of Zhurnal Fizicheskoy Khimii (USSR) 1954, v. 28, no. 7, p. 1235-1242.

A new kinetic method of applying labeled atoms for the study of the mechanism of complex chemical and biochemical processes is proposed. Procedures have been developed for calculating the rate constants of the formation and consumption of intermediate reaction products from data obtained by means of the kinetic method. (Author)
